

# FLUORIDATION: Mind Control of the Masses

by Ian E. Stephen

Extracted from his self-published booklet "The Dickinson Statement: A Mind-Boggling Thesis" published in NEXUS magazine August-September 1995 issue.

- Part 1 -

This story has a beginning, it has a middle but it has no ending. The 'ending' will undoubtedly be written in countless hospital records, on tiny gravestones, in the bones of the crippled and on the hearts of the bereaved. Even so, the true cause of the 'ending' will never be advertised. One record that slipped past the establishment net is duplicated herein but, believe it or not, the existence of this 'death certificate' has been denied, in writing and to overseas scientific inquiry, by Australian administrators.

What follows is but a fractional part of the 'middle' of a story that began before the turn of the century and which was provoked by a statement contained in an 'Address in Reply to the Government's Speech to Parliament', as recorded in Victorian Hansard of 12 August 1987, by Mr Harley Rivers Dickinson, Liberal Party Member of the Victorian Parliament for South Barwon. Hence the title.

The relevant Hansard abstract is reproduced herewith. It is emphasised that the writer imputes Mr Dickinson with no other responsibility for the contents of this thesis than being the parliamentary 'trigger' which motivated it and the researched data which it contains.

*"At the end of the Second World War, the United States Government sent Charles Eliot Perkins, a research worker in chemistry, biochemistry, physiology and pathology, to take charge of the vast Farben chemical plants in Germany.*

*"While there he was told by the German chemists of a scheme which had been worked out by them during the war and adopted by the German General Staff.*

*"This was to control the population in any given area through mass medication of drinking water. In this scheme, sodium fluoride occupied a prominent place.*

*"Repeated doses of infinitesimal amounts of fluoride will in time reduce an individual's power to resist domination by slowly poisoning and narcotising a certain area of the brain and will thus make him submissive to the will of those who wish to govern him.*

*"Both the Germans and the Russians added sodium fluoride to the drinking water of prisoners of war to make them stupid and docile."*

In a book written by Dr. Hans Mollenburgh of Haarlem, Holland, called *Fluoride - The Freedom Fight*, the author describes the ultimately successful endeavours to free the Dutch people from water fluoridation. (Those endeavours included the only properly conducted double-blind study ever done anywhere in the world into the effects of tap water fluoridated at one part of fluoride to 1,000,000 parts of water (1p.p.m.)

One brief passage is headed "Perkins", and a reproduction of that section gives sufficient confirmation, by a remote and independent source, of the "Dickinson Statement" as printed in Hansard, to reinforce

the need for additional investigation into this one 'behaviour control' aspect of the fluoride debate and relate it to 1987. (The entire "Perkins" paragraph is reproduced below.)

Elsewhere in this book, Dr Mollenburgh also relate how that first "Perkins" anecdote was confirmed in differing ways and from the reliable independent sources.

### **"Perkins"**

"When 1971 was drawing to a close, I received a paper containing a strange story. This story was to haunt us repeatedly throughout the long, drawn-out battle. It was a story resembling science fiction - bizarre and unbelievable. There are those who warned me not to even mention this story, and I can appreciate why. On the other hand, the task of an historian is not to relate things as they should have happened, but as they actually did happen.

".The Perkins saga was different from other fluoride stories.

"The story of industries hoodwinking the public into buying a pollutant as a medicine is simply a 'whodunit'. Grotesque though it may sound, it is no more than 'the consumer fraud of this polluted century' (as described in Fluoridation and Truth Decay by Gladys Caldwell). But the story I now read was different: it gave one the cold shivers. It told of a chemical engineer, Mr. Perkins, who related how immediately after the Second World War he was one of the Americans put into the well-known I.G. Farben Company in Germany. There he discovered that I.G. Farben had developed plans during the war to fluoridate the occupied countries, because it had been found that fluoridation caused slight damage to a specific part of the brain. This damage had a very particular effect. It made it more difficult for the person affected to defend his freedom. he became more docile towards authority.

"Scientists in the camps of both opponents and proponents of fluoride have always dismissed this story as mere poppycock, but it had a life of its own and reared its head time and again. It fed the suspicions of many people that 'there was more to fluoridation than meets the eye'.

"As far as I know, there is no one who has done any serious research into whether the fluoridated person is really more docile, easier to rule, more impressed by authority than the non-fluoridated ones. There is, though, one peculiar thing: every Dutch doctor has a medical reference book for 1984. One of the chapters is entitled "Tranquillisers". Looking at the 'minor tranquillisers' I find twenty-four substances: their chemical formulae do not show any connection with fluoride. However, there is also a heading, "major tranquillisers". Of those there are twenty-seven, and seven of them are a fluoride compound. One of theses is Semap. It is one of the strongest anti-psychotic substances we know. This means that twenty-five per cent of the major tranquillisers are connected with fluoride. I do not draw any conclusions. the only thing one can say at this point is, with Alice: "curiouser and curioser!"

### **Induced Apathy**

Actually there is little that is novel in the concept of controlling the minds and manners of the multitude by chemical/dietary means. That is what was practised by Hitler's regime is made the more credible when we know that as far back as 1938 the US Government, an ally to boot, and the government of a democratic Christian country, was considering the transformation of American citizens and others into 'zombies' by a number of proposed techniques. The US Army searched for '*the perfect incapacitating agent*', according to General Fellenz, '*to put in the enemy's water supply*'. Included in the drugs tested were the hallucinogenic LSD and the amnesiac BZ (10 times more potent than LSD), and a '*schizophrenic agent called bulbocapine*'.

The "Rockefeller Report" to the United States President on CIA activities said:

*"The drug program was part of a much larger CIA program to study possible means of controlling human behaviour".*

One drug which received special attention in the 'fifties and early sixties, under the cryptonym of MK-ULTRA, was suxamethonium chloride (listed under a number of product names including Anectine), a halogenated anti-cholinergic agent with all the symptomatic side-effects up to and including cardiac arrest ascribed to these agents in the medical literature.

Please retain the term 'anti-cholinergic' in mind, for owing to the health implications attendant on this particular anti-metabolic activity, it figures repeatedly in this thesis.

Note: An adviser to the US Government on hypnotism or psychological behaviour control, Dr. George Estabrooks, later became Chairman, Department of Psychology, Colgate University. Internationally, Colgate was and remains the most ardent producer and advocate for the fluoridation of a domestic product - fluoridated toothpaste.

Now, should the reader's mind be already boggled to the point of disbelief, there are two facts which, if known about and/or remembered, may instil sufficient confidence in that which is even more 'boggling' and is yet to come.

- Bromine (or Bromide) tea was administered to the enlisted men during the First and Second World Wars. The halogen (bromine) ingredient was said to quell the libido of the men and thus limit likely forays into the 'dens of iniquity' and the acquisition of venereal disease.
- The second fact is that, today, all Australian military establishments provide their own halogenated (fluoridated) water for the troops resident therein, for the official reason that the element is good for the developing teeth. Either we have a very immature military force, all under that age of twelve years when the mythical effect of fluoride ceases to exist, or else there is another more obscure, less altruistic reason for this drug 'treatment' of the troops.

Later on in this text we will recall certain happenings relative to ex-trainees from these establishments and the paradoxical effects of fluorides on behaviour of the human being.

### **The Cartel**

The Parliamentary "Dickinson Statement" refers to the "vast Farben chemical plants in Germany." It has been said by Anthony C. Sutton in his book, *Wall Street and the Rise of Hitler*:

*"Without the capital supplies by Wall Street, there would have been no I.G. Farben in the first place, and almost certainly no Adolph Hitler and World War II."*

Inteessen Gemeinschaft Farben (Interssen Gemeinschaft der Deuschen Teerfarbenindustrie or, simply, I.G. Farben) was a German chemical manufacturing concern that supplied the chlorine gas used by Germany during the First World War, but the eventual creation of the huge I.G. Farben cartel began in 1924 when American bankers began to arrange foreign loans in what Professor Carroll Quigley terms "the Dawes Plan, largely a J.P. Morgan production."

In 1928 Henry Ford merged his German assets with I.G.Farben, to be followed by the American Standard Oil Company (the Rockefellers) who, in concert with I.G. Farben developed the coal-to-oil hydrogenation process.

In a letter to Roosevelt from Berlin in the early thirties, the US Ambassador in Germany, William Dodd, said:

*"At the present moment, more than a hundred American corporations have subsidiaries here or co-operative understandings.*

*"The Duponts have their allies in Germany that are aiding in the armament business. Their chief ally is the I.G. Farben Company, a part of the government which gives 200,000 marks a year to one propaganda organisation operating on American opinion.*

*"Standard Oil Company... sent US\$2,000,000 here in December 1993 and has made US\$500,000 a year helping Germans make ersatz (a substitute) gas (the hydrogenation process of converting coal to gasoline) for war purposes: but Standard Oil cannot take any of its earnings out of the country except in goods.*

*"The International Harvester Company president told me their business here rose 33% a year (arms manufacture I believe) but they could take nothing out.*

*"Even our airplanes people have secret arrangements with Krupps.*

*"General Motors Company and Ford do enormous business here through their subsidiaries and take no profits out."*

The I.G. Farben assets in America were controlled by a holding company, American I.G .Farben, which listed on its Board of Directors: Edsel Ford, President of the Ford Motor Company; Chas. E. Mitchell, President of Rockefeller's National City Bank of New York; Walter Teagle, President of Standard Oil of New York; Paul Warburg, Chairman of the Federal Reserve and brother of Max Warburg, financier of Germany's war effort; and Herman Metz, a director of the Bank of Manhattan, controlled by the Warburgs.

It is a very interesting fact of history that three other members of the Board of American I.G. Farben were tried and convicted as German 'war criminals' for their 'crimes against humanity' during World War II, while serving on the I.G. Farben Board of Governors. None of the Americans who sat on the same board as those convicted was ever tried as a 'war criminal'.

Throughout the entire Second World War conflict, not one bomb fell on the I.G. Farben headquarters in Frankfurt, Germany, allegedly as a consequence of Allied orders.

In 1938, I.G. Farben borrowed 500 tons of tetra-ethyl lead, the gasoline additive, from Standard Oil.

During 1939, the year Germany invaded Austria and Poland, the Standard Oil Company of New Jersey loaned I.G. Farben US\$20,000,000 worth of high-grade gasoline.

In 1939 the American Aluminium Company (Alcoa), then probably the world's largest producer of sodium fluoride, transferred its technology to Germany (the Alted Agreement). The Dow Chemical Company transmitted its experience and technology in that same period.

Germany's two largest tank manufacturers were Opal, a subsidiary of General Motors (J.P. Morgan), and the German subsidiary of the Ford Motor Company.

Even with the purchase of oil from non-German sources, the major supplier of oil was still the Farben cartel. The I.G. Farben-Standard Oil co-operation for the production of synthetic oil gave the I.G. Farben cartel a monopoly on German gasoline production. Just under one half of the Germans' high-octane gasoline in 1945 was produced directly by I.G. Farben, and most of the balance by its affiliated companies.

So in 1941 when cylinders of Zyklon B, the deadly cyanide-based extermination gas made by I.G. Farben, were lethally unvalved on inmates of Auschwitz Bitterfeld, Walfen, Hoescht, Agfa, Ludwigshafen and Buchenwald, there were more than substantial links between huge American technology and German manufacturers.

Two questions must be asked here: (a) Was I.G. Farben associated with the formulation of Sarin and/or Soman, the German-developed fluorinated nerve gases that made Zyklon B little more than an underarm deodorant by comparison?; and (b) What of I.G. Farben today?

The answer to (a) is an unequivocal yes! As for (b), I.G. Farben signed cartel agreements with such companies as Imperial Chemical Industries (ICI), Borden, Carnation, General Mills, M.W. Kellogg Co., Nestle and Pet Milk, and I.G. Farben either owns outright, has had a substantial interest in or has had other cartel agreements with Owl Drug, Parke-Davis and Co., Bayer and Co., Whitehall Laboratories, Chef-Boy-Ar-Dee Foods, Bristol Meyers and Squibb and Sons. the list goes on and on and on and includes Proctor and Gamble who 'domesticated' the word "fluoride" with official encouragement in 1958, being the originators of the infamous "Crest" fluoridated toothpaste campaign.

The only reference to "Farben" traceable in a limited search of modern literature was in the 25th Edition of Martindale, under "FBA Pharmaceutical Limited: Products of Farbenfabriken Bayer."

All corporate traces of the huge I.G cartel have been absorbed by the hundreds, if not thousands, of one-time cartel members, but the 'malady lingers on'...

### **Foundations**

In Australia, the Dental Health and Research Foundation which has such names as Colgate, Kellogg and other ex-I.G. Farben associates listed among its governors and contributors had been irreverently but accurately dubbed "the fluoride mafia". Closely allied with this Sydney University 'foundation' in its printed promotional claims for fluorides and fluoridation, is Foundation 41. Unfortunately, the data of the 'thorough investigations' said to have been carried out by the latter 'foundation' into the halogen fluoride, its benefits and its hazards, have never been made available despite numerous appeals. An ABC science show's examination of the scientific integrity of Foundation 41 may explain the elusive (or is the word illusory?) data.

America is literally bursting at the seams with such foundations, but amongst the earlier names were the Rockefeller Foundation, The Carnegie Foundation and the Ford Foundation. It is necessary to mention these specifically because they were the first foundations to make grants in the population (control) field, and the Carnegie family merged with the Mellon family Institute to create Carnegie-Mellon University in Pittsburgh in 1967.

The Mellon family were the founders of the original Mellon Institute whence came the 'amazing (but totally fallacious) sodium fluoride/dental caries prevention discovery' - the discovery that literally turned 'garbage into gold'. The Mellon family also founded the American Aluminium Company (Alcoa), the largest producer of the waste toxin, sodium fluoride, which up to this point of 'caries discovery' had a relatively little known commercial or industrial value, was an environmental hazard of great public concern, and was very costly in terms of safe disposal.

So we retrace our steps to the "Dickinson Statement" in Hansard and Chas Eliot Perkins.

In a letter abstracted from *Fluoridation and Lawlessness* (published by the Committee for Mental Health and National Security) to the Lee Foundation for Nutritional Research, Milwaukee, Wisconsin, on 2nd October 1954, a Charles Eliot Perkins, scientist and author of Washington DC, and one must assume, that same Charles Eliot Perkins of the "Dickinson Statement" to the Victorian Parliament, said this (and the words of the last two lines of the second paragraph cannot be overemphasised):

*"We are told by the fanatical ideologists who are advocating the fluoridation of the water supplies in this country that their purpose is to reduce the incidence of tooth decay in children, and it is the plausibility of this excuse, plus the gullibility of the public and the cupidity of public officials that is responsible for the present spread of artificial water fluoridation in this country.*

*"However - and I want to make this very definite and positive - the real reason behind water fluoridation is not to benefit children's teeth. If this were the real reason, there are many ways in which it could be done which are much easier, cheaper and far more effective. The real purpose behind water fluoridation is to reduce the resistance of the masses to domination and control and loss of liberty..."*

*"When the Nazis, under Hitler, decided to go into Poland... the German General Staff and the Russian General Staff exchanged scientific and military ideas, plans and personnel and the scheme of mass control through water medication was seized upon by the Russian Communists because it fitted ideally into their plan to Communize the world..."*

*"I say this in all earnestness and sincerity of a scientist who has spent nearly 20 years research into the chemistry, bio-chemistry, physiology and pathology of fluorine: any person who drinks artificially fluorinated water for a period of one year or more will never again be the same person, mentally or physically."*

Mr. Perkins does not involve America, American institutions or individuals in his assertions, but when Major George Racey Jordan was in charge of the massive 'lend-lease airlift' operations from Great Falls, Montana, to Russia via Alaska, he queried the transshipment of considerable amounts of sodium fluoride via Fairbanks, Alaska, to Russia. He was told 'frankly' that it was to put into the drinking water in the prisoner-of-war camps to take away their will to resist.

The published knowledge that sodium fluoride was known for this mind- and behaviour-changing potential was available at the start of this century, as witness such entries as "Fluoricum Acidum" (*Encyclopedia of Pure 'Materia Medica'*, vol. ix, p.333).

America has long been interested in behaviour and mind control by chemical means. Americans who were at once financiers, industrialists and population-control advocates were intimately involved with Germany where chemical extermination and chemical behaviour control by, inter alia, sodium fluoride, were placed into practice. America transferred this knowledge and material, inter alia, to Russia during its 'lend-lease' co-operation. An American major producer of aluminium was the world's major source of sodium fluoride. American 'education and research' funded by (a) the major sodium fluoride producer, and (b) a 'foundation' involved in population control, was the origin of 'the dental caries prevention myth' associated with sodium fluoride.

A predominantly American company was the first to exploit this concept in dentifrice production, and American 'medical research' figured largely in the 'fluorination' processes that converted the negative embarrassment of mounting industrial waste to huge positive profit increase - processes that other countries hastened to emulate: processes which include the enormous outlet for fluorides in the fluoridation of water supplies.

Although fertiliser production has not been a part of this thesis, the following 'connections' with this point should be made. The manufacturing processes for synthetic dyes, explosives and fertiliser are almost chemically synonymous, and I.G. Farben was expert in all production phases of these 'necessities'. Sodium silico-fluoride was a waste constituent from the refining of phosphate rock, until a 'use' could be found or created for the waste.

A letter (reproduced below) for the United States Environmental Protection Agency throws the spotlight on the unique 'waste disposal via the public kidney' concept that was created.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
Washington DC. 20460  
Mar 30 1983  
OFFICE OF WATER  
Leslie A. Russell, DMD

363 Walnut Street  
Newtonville, Mass. 02160

Dear Dr. Russell:

Thank you for your letter of March 9, 1983, in regard to the fluoridation of drinking water.

The information available to the Environmental Protection Agency is that fluoridation is a safe and effective means for reducing the occurrence of dental caries. The fluoridation process has been endorsed by several Presidents of the United States and by several Surgeons General, including the current Surgeon General, Dr. C. Everett Koop. A copy of Dr. Koop's statement on fluoridation is enclosed.

Water treatment chemicals, including fluorosilic acid, have been evaluated for their potential for contributing to the contamination of drinking water. The Water Treatment Chemicals Codex, published by the National Academy of Sciences, prescribes the purity requirements for fluorosilic acid and other fluoridation chemicals.

In regard to the use of fluorosilic acid as a source of fluoride for fluoridation, this Agency regards such use as an ideal environmental solution to a long-standing problem. By recovering by-product fluorosilic acid from fertiliser manufacturing, water and air pollution are minimized, and water utilities have a low-cost source of fluoride available to them. I hope this information adequately responds to your concern.

Sincerely yours,

Rebecca Hanmer  
Deputy Assistant Administrator for Water

### **So What?**

The question raised by the Hansard "Dickinson Statement", and perhaps aggravated by this dissertation and data, is this: Was the Australian Government, in 1962-3 when it illegally (Australian Constitution, Section 51 [xxiiiA]) introduced "fluoridation of water supplies" to Australia, aware of its grotesque actions and of the grave results? The 'shonky' method of introduction, plus legal and official correspondence at that time, indicates in the affirmative.

Was the Crisp Royal Commission, when it 'found' in favour of fluoridation, and, incidentally, in favour of the major polluter and producer of fluoride in Tasmania (Electrolytic Zinc Corp., Risdon, Hobart), aware of the consequences of any such favourable findings? Conditions then and since mingle with some incredible documented coincidences, and unbelievable but documented official behaviour, including that of premiers and health ministers, and the paucity of current State parliamentary investigations into fluorine-based environmental problems, to convince the most sceptical that it was.

Was the Victorian Premier (Sir Rupert Hamer, who was later to publicly declare the dictatorial credo, "It was always tempting to override the people and impose a new order"), aware of these background facts when he instituted indemnified water fluoridation legislation and a subsequent fraudulently conceived and executed cover-up 'inquiry'? (Ballarat Courier, 6 October 1982) Irrespective of the obvious familial supplier advantages, it seems certain that he was so aware. Widespread publicity regarding subsequent alleged complex land company fraud transactions would seemingly underwrite the existence of the necessary character attributes to perform as implied.

Are the lies, denials, fabrications and evasions evident in Geelong with two fluoride pollution sources (aluminium smelting and fertiliser production), and Portland with ditto sources, no more than 'job protection' and 'rate protection' scares as is claimed, or is there a deeper, wider federal or

international instructional background behind the unmonitored pollution, with the health detriment therefrom and the 'secrecy legislation' invoked for the Victorian aluminium industry?

[Was] Mrs Thatcher's astronomical expenditure of United Kingdom's revenue on a fluoridation campaign in Northern Ireland a matronly concern for the youngsters' teeth, or perhaps an attempt to sedate the people and render them subservient to her autocratic dictates? Remember this. Mrs Thatcher has a background of academic chemistry and would be far from ignorant of the tranquillising effects of the halogens and their halides.

Similarly, her legal and political shenanigans (that is the only word to describe her behaviour) in the England fluoridation scene offer many avenues for questioning of her motives.

Are the lies, fabrications, omissions, evasions and official hysteria in the federal government and bureaucracy at the very mention of fluorides, fluoride pollution or water fluoridation, also common to the state governments and bureaucracies, and repeatedly backed up by the most lunatic science (as witness, the ministerially approved and internationally derided propaganda from the National Health and Medical research Council), royal and vice-regal intransigence, a frightening exhibition of this grim foreknowledge, all of which has abundant documentary support, or simply no more than a dastardly coincidence?

## - Part 2 -

### **A Multinational Can of Worms**

The link between Colgate and 'mind control' was mentioned earlier. That company's reputation with fluoride as a toothpaste ingredient is a promotional legend, particularly in Kenya where a ban on the TV advertising of fluoridated toothpaste produced some extraordinary pecuniary persuasion from Colgate in attempts to preserve the status quo for the company's benefit.

When official fluoridation corruption was exposed in New Zealand, a 'scientific study' was hurriedly executed to try to justify the original government/industry claims and repair the damage done to the fluoride empire. The accreditation appended to that study is reproduced here, with emphasis added:

#### **"ACKNOWLEDGEMENTS**

*We are grateful to the Director and staff of the Division of Dental Health, Department of Health, for the administrative and logistic support in the Auckland area. In particular we wish to mention Supervising Dental Nurses R. Patchett and K. Hyde, and assistant V. Clarke for their excellent arrangements and help in contacting, screening, and arranging the transportation of children to the examination centres. Mr Garth Stewart, bus driver, contributed much above and beyond his normal duties. The tremendous help and cooperation from principals and staff of all schools is most appreciated.*

***Financial support for this study was provided by the Colgate Palmolive Company (NZ)."***

Earlier, the name Kellogg was tied into the I.G. Farben corporate machinations. The words below are reproduced from the cover of a recent World Health Organisation (WHO) publication advocating fluoridation/fluorides, Appropriate Use of Fluorides for Human Health (underlining added): "Published under the joint sponsorship of the International Dental Federation, the W.K. Kellogg Foundation, and the World Health Organisation."

The intertwining, overlapping, interlocking co-incidence between erstwhile I.G. Farben companies and the continuing degradation of human health, our ecology and environment in exchange for the corporate dollar is virtually endless. But simply, as one example, the Nestle Company, once accused of selling nutritionally barren milk formula to third-world babies, has recently been found guilty of

marketing "Pure Apple Juice" which was anything but "pure" and had never been anywhere near an apple.

The Nestle Company has been nominated by the Ecologist as one of several multinational companies involved in the destruction of "the lungs of the Earth", the Brazilian rainforests.

### **It Really Gets In!**

The following pages make slight transition from historically recorded fact and logic to indisputable fact, biochemical fact and medical literature fact.

The pharmaceutical nomenclature and biochemical data involve fluorine/fluorides, with or without other ingredients, in virtually every phase of mind and behaviour control from mild sedation through 'controlled' unconsciousness to death.

'Side-effects' of all drugs have in common the 'paradoxical' characteristic of having an effect, on some individuals, exactly opposite of that which was the intentional effect, converting, for example, a tranquilliser into a potent stimulant, and thus the consumer from a 'pussy cat' into a slavering maniac.

Think back to the dosing of service personnel who are trained to hunt, maim and kill their fellow man while under the influence of this or other forms of chemical behaviour-control, and consider the possible reaction of such 'trainees' when discharged into the mainstream of society.

Are any of the terrorist activities around the globe, including otherwise inexplicable recent happenings in Australia, the grim result of such biochemical paradox?

### **Fluoridated Propellants and Refrigerants - Fluoridated Hole**

#### **in the Ozone Layer**

Halogenated hydrocarbons (sometimes called fluorocarbons or, when the name of the weapon must be changed to protect the guilty, just CFCs) are too numerous to list, being over 150 in number. In 'asthma' sprays, the warning exists in all product literature (available only to the doctor, not to the patient): "Excessive use of such inhalers or abuse of any aerosol propellant may result in toxic effects on the heart, and deaths have been reported." (Remember the term "anti-cholinergic".)

Another stark warning from "restricted distribution" literature: "Abuse. Of 110 deaths associated with the 'sniffing of solvents' between 1962 and 1969, fifty-nine were related to the use of fluorinated aerosol propellants."

The most frequently used fluorides under this heading (with their identifying numbers in parentheses) are:

1. Trichlorofluoromethane (11)
2. Dichlorodifluoromethane (12)
3. Chorotrifluoromethane (13)
4. Tetrafluoromethane (14)
5. Dichlorofluoromethane (21)
6. Chlorodifluoromethane (22)
7. Tetrachlorodifluoromethane (112)
8. Trichlorofluoroetane (113)
9. Dichlorofluorotetraethane (114)
10. Chloropentafluoroethane (115)
11. Difluoroethane (152a).

The side-effects of exposure to these fluorides, ranging from the 'more common' to the 'rarely reported' are as follows: cardiac toxicity (heart injury), respiratory depression (or breathing difficulties), bradycardia (or slowed pulse rate), convulsions (or central nervous system effects), psychomotor aberrations (or brain dysfunction), transient sedation (or heart and lung effects), ataxia (or brain problems), irritation of the upper respiratory tract, rise/fall in blood pressure, apnoea (or impaired lung function damage), tachycardia (or increased pulse rate), broncho-constriction (or asthma), palpitations (or irregular heart beat), narcosis (or brain 'drugging' again), and death.

All of the above 'side-effects' are associated with either the acute or the chronic symptoms of "anti-cholinergic" toxicity. And there is that word 'anti-cholinergic' again.

With a sufficient amount of these fluorocarbons (CFCs) being used (in the aerosol form alone) to threaten the world's atmospheric and climate conditions through deterioration of the ozone layer, it is not remarkable that this volume represents an environmentally hazardous anti-cholinergic (or anti-metabolic, ganglion-blocking) agent for all humanity.

Discharges from certain industrial processes carry substantial amounts of gaseous fluoride. In particular, hydrogen fluoride, when washed from the atmosphere by rain, forms a solution of hydrofluoric acid (0.7 ppm in Mojave Desert rainfall and 0.3 ppm in Siberian snows), so these anti-cholinergic discharges offer an additional threat by contributing to the fluoridated hole in the ozone layer.

One must assume it is owing to the enormous economic impact of this decaying ozone on the casual industries that sources of culprit industrial discharges have not featured in the current spate of international scientific concern nor in the records of the world's atmospheric/climatic monitors.

As an example of administratively approved industrial output, the first stage of the Portland (Victoria, Australia) smelter was issued with a pollution licence to discharge to the environment 70 tonnes per year of fluoride in gaseous and particulate forms. It is possible that this amount had been greatly exceeded because no monitoring of the discharges has thus far been executed.

Within a short 12 months after starting of smelting operations, an unknown but allegedly high number of pot-room workers at the smelter acquired 'pot-room asthma' - a convenient euphemism for anti-cholinergic damage.

#### **Fluorinated Pharmaceuticals - Fluoridated Income Generation**

In an effort to increase the bio-availability of the remedial ingredient or ingredients, many pharmaceutical products are halogenated. There are still many chlorinated and a few brominated products designed as nostrums for human disease states. Of recent years, the catalogue of fluoridated pharmaceuticals has doubled and redoubled until any representative listing would be beyond the scope of this paper.

The proclaimed intention of the pharmacist in fluorinating a product is to enhance still further its metabolic activity and therefore its alleged remedial qualities. For example, fludrocortisone acetate has glucocorticoid actions about 15 times as potent as hydrocortisone (unfluorinated), and mineralocorticoid effects more than 100 times as potent.

But, in potentiating the remedial effect, the undesirable side-effects are also worsened and the 'therapeutic' industry gets an income from two sources: from treating the original disease condition and, subsequently, from repairing the iatrogenic effects of the initial drug treatment.

Literature quote:

*"Muscular weakness is an occasional side-effect of most corticosteroids (hormones).. most evident with (1) fludrocortisone and (2) triamcinilone (both fluorinated hormones). It has been suggested that this effect is more pronounced when a fluorine atom is present in the 9th position."*

A useful example here is fluorinated toothpaste which has the long-term effect not of improving dental health but, by chronic anti-metabolic processes, of severely destroying it. Thus every Australian city with or without fluoridated water supplies has as much as doubled the number of registered dentists since the advent of fluorinated toothpaste, fluorinated gels and fluorinated rinses.

Or take the more extreme example of little Jason Burton who had non-prescription fluorinated dental decay-prevention tablets (sodium fluoride) provided for him by loving parents who were in total ignorance of their fluoride toxic hazard. Jason ingested a lethal dose of these tablets and died. We only know about Jason because the doctor recognised accurately and conscientiously registered the cause of his death. The existence of the death certificate has actually been denied by pro-fluoride Australian 'scientists' in reply to queries from overseas scientists.

It should be clear from the foregoing and what follows that human disease conditions, ranging from 'pot-room asthma' through the various perilous stages of anti-cholinergic response to expiration, can be accidentally or deliberately induced by an interminable list of fluoride pollution and fluorinated compounds which include a fluorinated environment, fluorinated atmosphere and a fluorinated drinking water supply.

It may be difficult for the 'man in the street' to believe that a substance with so many industrial, commercial and medical 'applications' could be derived from or structured around a scientifically recognised toxic waste product. This thesis should illustrate that the chemical, pharmaceutical, commercial and political worlds are well aware of the deadly potential of this halogen and intend to exploit that potential to everlasting human detriment.

#### **Fluorinated Tranquillisers - Fluoridated Acquiescence, Lethargy, Apathy, Stupidity.**

There are two basic forms of halogenated tranquilliser: major and minor. The minor tranquillisers are halogenated with either chlorine or bromine. The major tranquillisers, albeit of variable potency, are those numerically listed hereunder and are all fluorinated. All are anti-cholinergic agents with intentional effects on central nervous systems allied with cardiac and respiratory depression. The figure is the number of proprietary products each classification, in addition to the base chemical (in capitals).

1. 3 BENPERIDOL: Anquil, Frenactil, Glianimon
2. 4 DROPERIDOL: Droleptan, Dridol, Inaspin, Inapsine
3. 1 FLUANISONE: Sedalande
4. 1 FLUBUPERONE HYDROCHLORIDE: Buronil
5. 1 FLUNITRAZEPAM: Rohypnol
6. 3 FLUOPROMAZINEH: Psyquil, Siquil, Vesprin
7. 1 FLUOESONE: Bripidan
8. 1 FLURBIPROFEN: Froben
9. 0 FLOPENTHIXOL DECANOATE
10. 3 FLOPENTHIXOL HYDROCHLORIDE: Depixol, Fluanxol, Emergil
11. 0 FLUPHENAZINE DECANOATE
12. 0 FLUPHENAZINE ENANTHATE
13. 11 FLUPHENAZINE HYDROCHLORIDE: Modecate, Moditen, Anatensol, Daptum, Lyogen, Omce, Pancinol, Squalone Permitil, Prolixin, Sevinol.

14. 2 FLURAZEPAM HYDROCHLORIDE: Dalmane, Dalmadorm
15. 2 FLUSPIRILLINE: Redeptin, Imap
16. 2 HALOPERIDOL: Haldol, Serenace
17. 1 PENFLUORIDOL: Semap
18. 2 PIPAMPERONE: Dipiperon, Proptian
19. 18 TRIFLUOPERAZINE HYDROCHLORIDE: Amylozine Spansules, Stelabid Elixir, Stelabid Forte tabs, Stelazine, Eskazine, Calmazine, Chemflurazine, Clinazine, Fluazine, Novofluazine, Pentazine, Solazine, Trifluoper-Ez-Ets, Triflurin, Jatroneural, Terfluzin, Terfluzine
20. 0 TRIFLUPERIDOL
21. 2 TRIFLUPERIDOL HYDROCHLORIDE: Triperidol, Psicoperidol.

Notes: No. 5 FLUNITRAZEPAM (Rohypnol), which is fluorinated Valium, was recently prescribed for a youth in Western Australia and was blamed for his subsequent death.

Valium (Diazepam) was the "tranquilliser most involved" in road accident victims, according to a study carried out by Sydney University (Prof. Graham Starmer, Quantum, 26 April 1988). An obvious question: What aggravated effect would the increased potency of the fluorinated variety (Rohypnol) have on the road fatalities?

Rohypnol and Valium are proprietary names of Roche products. Roche was a Swiss member of the I.G. Farben cartel and is probably more infamous for the terrible Stanley Adams family tragedy accurately immortalised in the film, *A Song For Europe*.

The ABC TV program, *7.30 Report* (12 May 1988), told how the Western Australian penal system routinely administered both Serapax and Rohypnol (synergistic drugs) to prisoners to "make them into little robots most of the time" - including, it was alleged, throughout pregnancy.

This is a total of 21 fluorinated tranquillisers plus an additional 58 brand-name major tranquillisers using a fluoride as an ingredient. Undoubtedly many others have been added to this list since the reference work was published in June 1977.

#### Relevant Footnotes:

Florida International University (Rotton, Tikovsky and Feldman) showed that: "...minute amounts (0.45ppm) of sodium fluoride solution...impair visual sensorimotor performance" with a consequent slowing down in mental and physical reaction times (sedative or tranquillising effect)(JAP vol.67:2). This finding is of relevance when driving or operating machinery, if of no other consequence. Nevertheless, attempts over a number of years to draw the attention of those authorities allegedly concerned with driver/industrial safety, have been met only with silence or obstruction.

Early in 1987, Swedish researchers linked tranquillisers to birth defects, nominating (in Lancet) the drug benzodiazepine (Diazepam or Valium) as a particular culprit.

#### **Fluorinated Anaesthetics - Fluoridated Unconsciousness**

##### **(The penultimate in mind and behaviour control)**

As with fluorinated tranquillisers, there are a number of anaesthetics halogenated with chlorine and bromine. The 'popular' modern anaesthetics are those listed here, which are all fluorinated. Once again, all are anti-cholinergic agents with intentional, designed effects on central human nervous systems, accompanied by cardiac and respiratory depression.

1. FLUOXENE
2. ISOFLURANE: Forane

3. METHOXYFLURANE: Penthane
4. ENFLURANE: Ethrane
5. HALOTHANE: Fluorothane, Somnothane.

Note: There are scientific studies which demonstrate that the progeny of anaesthetists have a higher rate of birth defect than does the general community. A significant statistic in the established perinatal (SIDS) mortality/fluorine connection.

Some of the hazardous side-effects given in the medical literature for fluorinated anaesthetics are difficult to separate from those effects intended to induce a hopefully controllable unconscious state. For example, under "toxic effects" are listed "respiratory depression", "depressant action on the cardiovascular system", "Bradycardia and profound hypotension (or slowing pulse and drop in blood pressure)", "hepatic dysfunction" (or liver damage), "Halothane blocks the transmission of nerve impulses through ganglia" (or central nervous system inhibition), and "cardiac arrest" (or death).

In other words, all of the anti-cholinergic effects variously intended or variously inherent are induced by the fluorinated propellants, fluorinated pharmaceuticals and/or fluorinated tranquillisers and fluorinated exterminators.

So far, these "data" pages illustrate how fluorine and fluoridation have been sold, packaged and/or prescribed for both public and professional credibility on 'health' grounds. The final page deals with the same halogen as it really is, really was and always will be, and as it is employed in those products listed. It is one of the deadliest, multi-functional and insidious poisons known to mankind.

It is significant, in the context of deliberate government mind-control and physical/chemical intervention, to note that in Australia the hazardous fluorinated anti-metabolic agents and anti-cholinergic agents enjoy federal and state government approval and subsidised distribution, whilst the safe nutritional substances, vitally necessary to combat and repair systemic chronic toxic injury wrought by the "free drugs", are available only at considerable cost to the victim. Furthermore, the same bureaucracy that approved the 'killers' has sought to restrict public access to the remedial supplements. Some local councils even infringe the laws of medical prescription and issue free sodium fluoride tablets for dosing of children without any warning, muchless any advice on antidotes.

And those same government instrumentalities and ministerial 'heads' that oppose the ready availability of nutritional supplements are the same ministers and public servants who lie, cheat, defraud, defame, blackmail and coerce to increase the distribution or compel the ingestion of fluorides and fluoride-bearing products: the same as those who, in defence of the Australian Constitution (section 51 [xxiiia]), legislated to have the chemical dumped into our drinking water supplies.

To sum up the above, the killer drugs are approved, encouraged or enforced and subsidised, while the vital remedial nutrients and metabolites (rendered necessary by the 'free' hazardous drugs) are not subsidised but availability is officially discouraged and obstructed.

### **Fluorinated Exterminators - Fluoridated Death**

#### **(The Ultimate in Mind and Behaviour Control)**

As with tranquillisers and anaesthetics, chemical warfare gases are halogenated. Riot-control gases, tear gas or lacrimators employ either chlorine (chlorinated, e.g. mace) or bromine (brominated) as halogenators, but the lethal German-developed (I.G. Farben) nerve gases Soman and Sarin are both fluorinated and replaced the earlier chlorinated Tabun for speed and efficacy in killing the enemy by their immediate anti-cholinergic agency.

1. SARIN: Isopropyl methylphosphonofluoride
2. SOMAN: Pinacolyl methylphosphonofluoride.

The almost immediate death caused by exposure to nerve gases is a result of instantaneous 'blocking' of catalysis and nerve action by the fluorinated gas, by acute anti-cholinergic agency (enzymatic 'blocking') and consequent cessation of heart and lung function.

Included here are two medical fluorinated compounds called:

3. DYFLOS (DI-isopropyl fluorophosphate): Designed to treat, inter alia, the eye disease glaucoma, it is described in the literature as an "irreversible cholinesterase inhibitor (anti-cholinergic agent) and the toxic effects may be prolonged. Systemic toxicity occurs after inhalation of the vapour."
4. FLUOROURACIL: Uracil is an essential human metabolite. It is fluorinated in a 'last resort' attempt to control the growth and/or destroy cancer cells through enzyme (DNA and RNA) 'blocking' activity. "The toxic effects are severe and sometimes fatal." It is often paradoxical in action and actually provokes cancer. Side-effects, all severe and numerous, are those associated with other fluorinated anti-cholinergic agents set out previously.

The physiological consequences attending this deliberate fluorination of a human metabolite illustrates the deadly peril of any fluorination process but, in particular, the fluorination of a vital metabolite (rendering it anti-metabolic in action), human electrolyte or essential nutrient such as water.

5. FLUOROACETAMIDE (Compound 1081): Another instance of a vital metabolite, 'acetamide' being converted (halogenated) to a potent anti-metabolite by fluorination.

In Britain, this product, a close chemical cousin to the stuff used to fluorinate water supplies and toothpastes, etc., "is restricted to the extermination of rats in ships and sewers."

6. HYDROFLUOROSILICIC ACID (fluorosilicic acid, hydrofluoric acid): A toxic 'waste product' of the fertiliser industry, it is now used for fluoridation of drinking water.

To quote from medical literature, "Warning: Inhalation Hazard. Inhalation of hydrofluorosilicic acid from soaked cotton clothing could cause irreversible lung damage in one minute" due to anti-cholinergic activity.

7. SODIUM FLUORIDE: A 'waste product' of the aluminium industry and used in fluoridation of drinking water, this hazardous intractable garbage has become, by dint of promotion and sly public re-education, the active ingredient in fluorinated pesticides, fungicides, nematocides, rodenticides, anaesthetics, tranquillisers, fluorinated medications (pharmaceuticals), a number of industrial and domestic products, fluorinated dental gels, rinses and toothpastes.

In other words, sodium fluoride is so much a part of multibillion-dollar industrial and pharmaceutical income that any withdrawal for any reason by the promoters, the fluoridationists or by anyone who has supported them for whatever purpose is impossible on a financial basis, embarrassing on a reputation basis, and unthinkable on a legal basis.

8. SODIUM FLUOROCETATE (Compound 1080, as No.5 above): This seems to be the preferred 'exterminator' for rodents, etc., on the proclaimed grounds that it is slightly less hazardous for humans. Death by 1080 will take a little longer and be slightly less painful than death by 1081. It will, however, be no less permanent.
9. SODIUM SILICOFLUORIDE: This waste product of the fertiliser industry is used in fluoridation of drinking water. By international law it must be removed from fertiliser so that pastures, crops, sheep and cattle will not be harmed. That it is then sold for disposal through the community kidneys is not a matter of international concern. Until this more profitable use was found, it was used almost exclusively as an insecticide and rodenticide - an exterminator.

While this thesis is directed at the 'grass roots' where people are most likely to be affected (as a result of being screened from the truth), there will be some who, retaining the foolish but implanted 'reference complex', will need to verify the content. This will be a simple matter for their own or public library sources without biased prompting by the author.

That said, the author acknowledges the considerable value of the following for evidential support of this thesis:

*The Extra Pharmacopoeia*, Martindale, editions nos. 25 and 27.

*Encyclopaedia Britannica*, ed. no. 15

*The Unseen Hand*, by Ralph Epperson.

*The Case Against Fluoridation*, by Lee Hardy.

*Operation Mind Control*, by Walter Bowart

*World Without Cancer*, by G. Edward Griffin.

*The Crime and Punishment of I. G. Farben*, by Joseph Borkin.

Certain unrefuted, unchallenged correspondence, allegations and scientific papers by the author.

## **Epilogue**

Since it was the parliamentary activities of Harley Rivers Dickinson, Member for South Barwon (Victoria), that prompted the research that led to writing of this thesis, it is fitting that the epilogue should refer to more representational work on the same subject (fluoridation of water supplies) by the same Member in the same Parliament.

In February 1983, Harley Dickinson placed two "questions on notice" to the then Minister for Health. Roper, on behalf of his Geelong district constituents. The first question was in 10 parts and the second in eight parts, affording some excuse for delay in preparing comprehensive answers.

The questions were answered and recorded in Hansard of 7 April 1988 by the now-displaced T. Roper, on behalf of the present Minister for Health, D. White, more than five years after the asking - a period of waiting intolerable in a health matter, even were the questions answered in a generally responsible fashion which they certainly were not.

Without going into the detail of questions and answers, having pointed out the extreme and perilous lassitude of the (Victorian) State Government, suffice it to remark that the answers varied from patent falsehood to inadvertent exposure of ministerial fraud: from the repeated quoting of proven fraudulent 'evidence' to accurate but selected part-quotations of literature evidence: from admissions of impropriety by the Victorian bureaucracy to baseless assertions.

## **Conclusion**

This story is full of overlapping, interwoven, interlocking circumstance beyond the statistical or reasonable bounds of chance or coincidence. Pursuing each facet, each tortuous avenue from "The

Dickinson Statement" as a starting point will confound and dumbfound the pursuer with still more mind-boggling information.

The histories of Cecil Rhodes, Rhodes Scholarships, the Bilderbergers, the US Federal Reserve, the Illuminati, international banking, the House of Rothschild and General Aniline and Film, are just a few of the 'avenues' to be explored that will make your hair 'stand on end'!
